

ABSTRACT OF THE DISCLOSURE

A pressure sensitive adhesive article which hardly gives adverse effects caused by silicone compound and which has an improved
5 releasability that makes it possible to peel off a release sheet from a pressure sensitive adhesive layer with a small release force is provided. Such a pressure sensitive adhesive article 1A is constituted from a pressure sensitive adhesive sheet 2A and a release sheet 3A. The
10 pressure sensitive adhesive sheet 2A comprises a base material 21 of the pressure sensitive adhesive sheet 2A and a pressure sensitive adhesive layer 22. The release sheet 3A comprises a release sheet base material 31 and a releasing agent layer 32. The releasing agent layer 32 is constituted
of polyolefin resin having a density of 0.94 g/cm^3 or less. A wetting
15 tension at the surface of the releasing agent layer 32 which faces the pressure sensitive adhesive layer 22 measured according to JIS K 6768 is 33 mN/m or less.
